

Subject and unit	Year	Term
Chemistry Unit 1 Physical Chemistry	12	Autumn 1

Big Picture	This unit covers chemical properties of elements in relation to their atomic structure. The arrangement of electrons in their orbitals will be used to explain how the periodic table is organized. This unit also introduces the mass spectrometer and how it is used to measure atomic masses.
--------------------	--

No/Place in Sequence	Required/desired prior knowledge and skills.	Tasks and independent work.	Assessment opportunities	Further learning opportunities	Link to SPEC And Core Practicals						
<p><i>Lesson number.</i></p> <p><i>How does the task relate to big picture? E.G By the end of this we can ...</i></p>	<p><i>What does the student need to know and know how to...before s/he arrives?</i></p> <p><i>What would be desirable prior knowledge/skill?</i></p>	<p><i>What activities will each student do in the lesson?</i></p> <p><i>What wider study skill is actively developed?</i></p>	<p><i>How will you check learning in the lesson and over time?</i></p> <p><i>How does AfL build toward AOL?</i></p>	<p><i>Bridging lessons (closing knowledge GAP)</i></p> <p><i>Home learning, extension, projects etc.</i></p>	<p><i>Are on the right track for the final assessment?</i></p> <p>AOs.</p>						
<p>Lesson 1: Atomic Structure</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 20px; height: 20px; background-color: #90EE90;"></td> <td>Evaluate how and why atomic structure model developed over time.</td> </tr> <tr> <td style="width: 20px; height: 20px; background-color: #FFFF00;"></td> <td>Describe the structure of atoms in terms of protons, neutrons and electrons.</td> </tr> <tr> <td style="width: 20px; height: 20px; background-color: #FFD700;"></td> <td>Define the terms, relative mass and relative charge of protons, neutrons and electrons.</td> </tr> </table>		Evaluate how and why atomic structure model developed over time.		Describe the structure of atoms in terms of protons, neutrons and electrons.		Define the terms, relative mass and relative charge of protons, neutrons and electrons.	<p>BRICK: Basics: Reflective</p> <p>The structure of the atom and its constituents will be reviewed.</p>	<ul style="list-style-type: none"> Drawing and labeling structure of an atom. Write electronic arrangement for different elements. Evaluate how atomic structure developed over time. 	<p>Mini-plenary: Multiple choice mini-quizzes .</p> <p>Exam practice question. www: EBI:</p>	<p>STRETCH: How can we tell what is inside an atom if we can't see it?</p> <p>Assessed homework:</p>	<p>RSC timeline: http://www.rsc.org/chemsoc/timeline</p> <p>RSC: Chemists in a social & historical context: http://www.rsc.org/learn-chemistry/resource/resource/00001332/the-atom-detectives?cmpid=COMP00002843</p> <p>RI Christmas Lecture – section on atomic structure http://www.rsc.org/learn-chemistry/resource/resource/00001119/ri-christmas-lectures-2012-atomic-</p>
	Evaluate how and why atomic structure model developed over time.										
	Describe the structure of atoms in terms of protons, neutrons and electrons.										
	Define the terms, relative mass and relative charge of protons, neutrons and electrons.										

<p>Lesson 2: Isotopes</p> <table border="1" data-bbox="190 331 685 587"> <tr> <td style="background-color: #90EE90;">Explain</td> <td>the existence of isotopes.</td> </tr> <tr> <td style="background-color: #FFFF00;">Determine</td> <td>the number of fundamental particles in atoms and ions.</td> </tr> <tr> <td style="background-color: #FFA500;">Define</td> <td>the term isotope.</td> </tr> </table>	Explain	the existence of isotopes.	Determine	the number of fundamental particles in atoms and ions.	Define	the term isotope.	<p style="text-align: center;">BRICK: Basics: Reflective</p> <p>Atomic structure and isotopes (GCSE).</p>	<ul style="list-style-type: none"> Students identify atoms and ions from numbers of protons, neutrons and electrons, and vice versa. Calculate number of neutrons using mass number and atomic number. 	<p>Mini-plenary: Answer the question on mini-white board.</p> <p>Exam practice question. www: EBI:</p> <p>Assessed homework:</p>	<p>STRETCH: How can we tell what is inside an atom if we can't see it?</p>	<p>structure Academy</p>
Explain	the existence of isotopes.										
Determine	the number of fundamental particles in atoms and ions.										
Define	the term isotope.										
<p>Lesson 3: Mass Spectrum</p> <table border="1" data-bbox="190 699 685 1050"> <tr> <td style="background-color: #90EE90;">Calculate</td> <td>relative atomic mass of elements using isotope abundance data.</td> </tr> <tr> <td style="background-color: #FFFF00;">Interpret</td> <td>simple mass spectra of elements</td> </tr> <tr> <td style="background-color: #FFA500;">Describe</td> <td>how mass spectrometry is used to identify elements and determine relative molecular mass.</td> </tr> </table>	Calculate	relative atomic mass of elements using isotope abundance data.	Interpret	simple mass spectra of elements	Describe	how mass spectrometry is used to identify elements and determine relative molecular mass.	<p style="text-align: center;">BRICK: Knowledge</p> <p>Atomic structure and isotopes (GCSE).</p>	<ul style="list-style-type: none"> Students determine the relative atomic mass of elements using isotope abundance data (this could include data for elements found in meteorites to show some difference). Students look at the mass spectra of compounds to determine the relative formula mass. 	<p>Mini-plenary: Quick on the draw exam question.</p> <p>Assessed homework:</p>	<p>STRETCH: Students investigate the use of mass spectroscopy in drug testing athletes.</p>	<p>RSC: Build an atom simulation: http://www.rsc.org/learn-chemistry/resource/res00001433/build-an-atom-simulation-rsc-funded</p> <p>RSC Spectral School: http://www.rsc.org/learn-chemistry/collections/spectroscopy</p> <p>Isotope data: http://www.chem.ualberta.ca/~massspec/atomic_mass_abund.pdf</p> <p>Data on isotopes in meteorites: 'The Elements: Their Origin, Abundance, and Distribution' by P. A. Cox</p>
Calculate	relative atomic mass of elements using isotope abundance data.										
Interpret	simple mass spectra of elements										
Describe	how mass spectrometry is used to identify elements and determine relative molecular mass.										

<p>Lesson 4: Ionisation Energy</p> <table border="1" style="width: 100%;"> <tr> <td style="width: 20px; height: 20px; background-color: #90EE90;"></td> <td>Explain first and successive ionisation energies in period 3 and group 2.</td> </tr> <tr> <td style="width: 20px; height: 20px; background-color: #FFFF00;"></td> <td>Describe the structure of atoms and ions in terms of shells and sub shells.</td> </tr> <tr> <td style="width: 20px; height: 20px; background-color: #FFA500;"></td> <td>Define ionisation energy and write equations for the first and second ionisation energies.</td> </tr> </table>		Explain first and successive ionisation energies in period 3 and group 2.		Describe the structure of atoms and ions in terms of shells and sub shells.		Define ionisation energy and write equations for the first and second ionisation energies.	<p>BRICK: Knowledge</p> <p>Learning about first ionization energies and linking them to atomic structure and subatomic particles in each atom.</p>	<ul style="list-style-type: none"> Students write the electron structure of atoms and ions with $Z=1-36$ Students research values of first ionisation energies for elements $Z=1-36$ and plot them on a graph and then explain trends. 	<p>Mini-plenary: Questions on the board. Peer assessment.</p> <p>Self assessment in task review.</p> <p>Assessed homework:</p>	<p>STRETCH:</p>	<p>Orbitron (shows shapes of orbitals): http://winter.group.shef.ac.uk/orbitron/</p> <p>Ionisation energy data (1st and successive) http://en.wikipedia.org/wiki/Molar_ionization_energies_of_the_elements</p>
	Explain first and successive ionisation energies in period 3 and group 2.										
	Describe the structure of atoms and ions in terms of shells and sub shells.										
	Define ionisation energy and write equations for the first and second ionisation energies.										
<p>Lesson 5: Period 3 Elements</p> <table border="1" style="width: 100%;"> <tr> <td style="width: 20px; height: 20px; background-color: #90EE90;"></td> <td>Analyse data about melting points of period 3 elements and explain these in relation to their structure and bonding</td> </tr> <tr> <td style="width: 20px; height: 20px; background-color: #FFFF00;"></td> <td>Explain the trends in atomic radius and first ionisation across period 3.</td> </tr> <tr> <td style="width: 20px; height: 20px; background-color: #FFA500;"></td> <td>Describe the trends in atomic radius and first ionisation across period3.</td> </tr> </table>		Analyse data about melting points of period 3 elements and explain these in relation to their structure and bonding		Explain the trends in atomic radius and first ionisation across period 3.		Describe the trends in atomic radius and first ionisation across period3.	<p>BRICK: Knowledge</p> <p>Ionisation energy and the periodic table.</p>	<ul style="list-style-type: none"> Students plot data on graphs for atomic radius, first ionisation energy and melting point and explain those trends 	<p>Do Now: Mini-quiz based on previous lessons (mastery style questions)</p> <p>Mini-plenary: Questions on the board. Self assessment.</p> <p>Self assessment in task review.</p> <p>Assessed homework:</p>	<p>STRETCH:</p>	
	Analyse data about melting points of period 3 elements and explain these in relation to their structure and bonding										
	Explain the trends in atomic radius and first ionisation across period 3.										
	Describe the trends in atomic radius and first ionisation across period3.										

<p>Lesson 6: Group 2 Elements</p> <table border="1"> <tr> <td style="background-color: #90EE90;">Analyze</td> <td>data about the melting point of group 2 elements and explain this in relation to bonding.</td> </tr> <tr> <td style="background-color: #FFFF00;">Explain</td> <td>the trends in atomic radius and first ionisation.</td> </tr> <tr> <td style="background-color: #FFA500;">Describe</td> <td>the trends in atomic radius, first ionisation energy and melting point of group 2 elements (Mg-Ba)</td> </tr> </table>	Analyze	data about the melting point of group 2 elements and explain this in relation to bonding.	Explain	the trends in atomic radius and first ionisation.	Describe	the trends in atomic radius, first ionisation energy and melting point of group 2 elements (Mg-Ba)	<p>BRICK: Knowledge</p>	<ul style="list-style-type: none"> Students plot data on graphs for atomic radius, first ionisation energy and melting point and explain those trends. 	<p>Do Now: Answer the questions review-self assessment.</p> <p>Mini-plenary: Exam practice-Self assessment.</p> <p>Assessed homework:</p>	<p>STRETCH:</p>	<p>RSC AfL exercise on Group 2: http://www.rsc.org/learn-chemistry/resource/res00000118/afl-group-2</p> <p>Royal College of Radiologists leaflet on barium meals: https://www.rcr.ac.uk/docs/patients/workdocs/CRPLG_meal.doc</p>
Analyze	data about the melting point of group 2 elements and explain this in relation to bonding.										
Explain	the trends in atomic radius and first ionisation.										
Describe	the trends in atomic radius, first ionisation energy and melting point of group 2 elements (Mg-Ba)										
<p>Lesson 7: Reaction of group 2 with water.</p> <table border="1"> <tr> <td style="background-color: #90EE90;">Explain</td> <td>how magnesium is used in the extraction of titanium from $TiCl_4$.</td> </tr> <tr> <td style="background-color: #FFFF00;">Carryout</td> <td>experiment of reaction of Mg-Ba with water and Mg with steam and record results.</td> </tr> <tr> <td style="background-color: #FFA500;">Describe</td> <td>the reaction of Mg-Ba with water.</td> </tr> </table>	Explain	how magnesium is used in the extraction of titanium from $TiCl_4$.	Carryout	experiment of reaction of Mg-Ba with water and Mg with steam and record results.	Describe	the reaction of Mg-Ba with water.	<p>BRICK: Knowledge</p> <p>Knowledge of periodic table and general properties of group 2 elements (GCSE)</p>	<ul style="list-style-type: none"> Practical Opportunity: Students test the reactions of Mg-Ba with water and Mg with steam and record their results. 	<p>Assess practical skills: Following safety procedure.</p> <p>Carefully handle solids and liquids, including corrosive, irritant, flammable and toxic substances.</p>	<p>STRETCH:</p>	<p>RSC AfL exercise on Group 2: http://www.rsc.org/learn-chemistry/resource/res00000118/afl-group-2</p> <p>Royal College of Radiologists leaflet on barium meals: https://www.rcr.ac.uk/docs/patients/workdocs/CRPLG_meal.doc</p>
Explain	how magnesium is used in the extraction of titanium from $TiCl_4$.										
Carryout	experiment of reaction of Mg-Ba with water and Mg with steam and record results.										
Describe	the reaction of Mg-Ba with water.										

<p>Lesson 8: Solubility of group 2 hydroxides and sulphates in water.</p> <table border="1" data-bbox="190 300 685 678"> <tbody> <tr> <td data-bbox="190 300 224 427"></td> <td data-bbox="224 300 685 427">Discuss the use of CaO/CaO₃ to remove SO₂ from the gases and Mg (OH)₂ in medicine.</td> </tr> <tr> <td data-bbox="190 427 224 555"></td> <td data-bbox="224 427 685 555">Explain why BaCl₂ solution is used to test for sulphates ions and why it is acidified.</td> </tr> <tr> <td data-bbox="190 555 224 678"></td> <td data-bbox="224 555 685 678">Describe the relative solubilities of group 2 hydroxides and sulphates (Mg-Ba) in water.</td> </tr> </tbody> </table>		Discuss the use of CaO/CaO ₃ to remove SO ₂ from the gases and Mg (OH) ₂ in medicine.		Explain why BaCl ₂ solution is used to test for sulphates ions and why it is acidified.		Describe the relative solubilities of group 2 hydroxides and sulphates (Mg-Ba) in water.	<p>BRICK: Knowledge</p> <p>Knowledge of definitions: Soluble Insoluble Precipitate.</p>	<ul style="list-style-type: none"> Practical Opportunity: Students test the solubility of Group 2 hydroxides by mixing solutions of soluble Group 2 salts with sodium hydroxide and record their results. 	<p>Assess practical skills: Following safety procedure.</p> <p>Carefully handle solids and liquids, including corrosive, irritant, flammable and toxic substances.</p>	<p>STRETCH:</p>	
	Discuss the use of CaO/CaO ₃ to remove SO ₂ from the gases and Mg (OH) ₂ in medicine.										
	Explain why BaCl ₂ solution is used to test for sulphates ions and why it is acidified.										
	Describe the relative solubilities of group 2 hydroxides and sulphates (Mg-Ba) in water.										
<p>Lesson 9: Mid-term Assessment</p> <table border="1" data-bbox="190 719 685 1038"> <tbody> <tr> <td data-bbox="190 719 224 815"></td> <td data-bbox="224 719 685 815">Calculate the relative atomic mass of elements from abundance data.</td> </tr> <tr> <td data-bbox="190 815 224 911"></td> <td data-bbox="224 815 685 911">Describe and explain ionisation energies of period 3 elements.</td> </tr> <tr> <td data-bbox="190 911 224 1038"></td> <td data-bbox="224 911 685 1038">Describe atomic structure, its subatomic constituents, shells and orbitals.</td> </tr> </tbody> </table>		Calculate the relative atomic mass of elements from abundance data.		Describe and explain ionisation energies of period 3 elements.		Describe atomic structure, its subatomic constituents, shells and orbitals.	<p>BRICK: Reflective</p> <p>Knowledge of all topic covered in lessons 1-8.</p> <ul style="list-style-type: none"> Atomic structure Isotopes Mass spectrum Period 3 Group 2 elements. 	<p>Students complete end of topic test.</p>	<p>Assessment based on content covered in lessons 1-8.</p>		
	Calculate the relative atomic mass of elements from abundance data.										
	Describe and explain ionisation energies of period 3 elements.										
	Describe atomic structure, its subatomic constituents, shells and orbitals.										
<p>Lesson 10: Assessment Review</p> <table border="1" data-bbox="190 1102 685 1377"> <tbody> <tr> <td data-bbox="190 1102 224 1198"></td> <td data-bbox="224 1102 685 1198">Reflect on the test and set revision targets.</td> </tr> <tr> <td data-bbox="190 1198 224 1262"></td> <td data-bbox="224 1198 685 1262">Correct answers (Self assessment)</td> </tr> <tr> <td data-bbox="190 1262 224 1382"></td> <td data-bbox="224 1262 685 1382">Review exam questions. www/EBI</td> </tr> </tbody> </table>		Reflect on the test and set revision targets.		Correct answers (Self assessment)		Review exam questions. www/EBI	<p>BRICK: Reflective</p>	<p>Students review their assessments and correct them.</p>	<p>Self assessment</p>		
	Reflect on the test and set revision targets.										
	Correct answers (Self assessment)										
	Review exam questions. www/EBI										

<p>Lesson 11: Ionic Bonding</p> <table border="1" data-bbox="190 300 683 592"> <tr> <td style="background-color: #90EE90;">Explain</td> <td>the properties of ionic compounds.</td> </tr> <tr> <td style="background-color: #FFFF00;">Describe</td> <td>the formation of ionic compounds and their properties.</td> </tr> <tr> <td style="background-color: #FFA500;">Predict</td> <td>the charge on a simple ion using the position of elements in the periodic table.</td> </tr> </table>	Explain	the properties of ionic compounds.	Describe	the formation of ionic compounds and their properties.	Predict	the charge on a simple ion using the position of elements in the periodic table.	<p>BRICK: Basics and reflective.</p> <p>Knowledge of electron configuration, valence electrons for different elements and linking this to their groups.</p> <p>Ionic bonding from GCSE.</p>	<ul style="list-style-type: none"> Students explain the properties of ionic compounds. Students write the formula of ionic compounds, including those with common compound ions. 	<p>Do Now: Answer the questions review-self assessment.</p> <p>Mini-plenary: Exam practice-Self assessment.</p> <p>Assessed homework:</p>	<p>STRETCH:g</p>	<p>Nuffield Science Data Book (free download): http://www.nationalsciencecentre.org.uk/elibrary/resource/3402/nuffield-advanced-science-book-of-data-second-edition</p> <p>Chemistry Data Book (Starck, Wallace, McGlashan) ISBN: 9780719539510</p>
Explain	the properties of ionic compounds.										
Describe	the formation of ionic compounds and their properties.										
Predict	the charge on a simple ion using the position of elements in the periodic table.										
<p>Lesson 12: Covalent and Metallic Bonding</p> <table border="1" data-bbox="190 708 683 975"> <tr> <td style="background-color: #90EE90;">Explain</td> <td>the properties of covalent properties.</td> </tr> <tr> <td style="background-color: #FFFF00;">Describe</td> <td>the formation of covalent and metallic bonds and their properties.</td> </tr> <tr> <td style="background-color: #FFA500;">Draw/represent</td> <td>covalent bonds using lines.</td> </tr> </table>	Explain	the properties of covalent properties.	Describe	the formation of covalent and metallic bonds and their properties.	Draw/represent	covalent bonds using lines.	<p>BRICK: Basics and reflective.</p> <p>Knowledge of electron configuration, valence electrons for different elements and linking this to their groups.</p> <p>Covalent bonding from GCSE</p>	<ul style="list-style-type: none"> Students describe differences between ionic and covalent bonding. Students describe similarities and differences between covalent and co-ordinate bonds. Students draw diagrams of molecules showing covalent and co-ordinate bonds as lines/arrows respectively (“stick” diagrams). 	<p>Mini-plenary: Exam practice-Self assessment.</p> <p>Assessed homework:</p>	<p>STRETCH:</p>	<p>Animation showing covalent bonding http://www.chemit.co.uk/resource/Details/87</p>
Explain	the properties of covalent properties.										
Describe	the formation of covalent and metallic bonds and their properties.										
Draw/represent	covalent bonds using lines.										

<p>Lesson 13:</p> <table border="1" data-bbox="190 300 683 592"> <tbody> <tr> <td style="background-color: #90EE90;"></td> <td>Compare the different types of bonding and explain the differences between them.</td> </tr> <tr> <td style="background-color: #FFFF00;"></td> <td>Explain metallic bonding and how it relates to its structure.</td> </tr> <tr> <td style="background-color: #FFD700;"></td> <td>Describe the properties of metallic bonds.</td> </tr> </tbody> </table>		Compare the different types of bonding and explain the differences between them.		Explain metallic bonding and how it relates to its structure.		Describe the properties of metallic bonds.	<p>BRICK: Basics and reflective.</p> <p>Knowledge of electron configuration, valence electrons for different elements and linking this to their groups.</p> <p>Metallic bonding from GCSE</p>	<ul style="list-style-type: none"> Students describe differences between metallic, ionic and covalent bonding. Students explain the properties of metals. 	<p>Mini-plenary: Exam practice- Self assessment.</p> <p>Assessed homework:</p>	<p>STRETCH: Which metals have the highest and lowest melting points – sodium, potassium, magnesium – explain your reasoning?</p>	<p>Nuffield Science Data Book (free download): http://www.nationalsciencecentre.org.uk/elibrary/resource/3402/nuffield-advanced-science-book-of-data-second-edition</p> <p>Chemistry Data Book (Starck, Wallace, McGlashan) ISBN: 9780719539510</p>
	Compare the different types of bonding and explain the differences between them.										
	Explain metallic bonding and how it relates to its structure.										
	Describe the properties of metallic bonds.										
<p>Lesson 14: Different crystal structures</p> <table border="1" data-bbox="190 715 683 1018"> <tbody> <tr> <td style="background-color: #90EE90;"></td> <td>Explain the properties of the different structures/ crystals.</td> </tr> <tr> <td style="background-color: #FFFF00;"></td> <td>Draw the structures of different types of crystals.</td> </tr> <tr> <td style="background-color: #FFD700;"></td> <td>Describe the structure of ionic, molecular, giant covalent and metallic substances.</td> </tr> </tbody> </table>		Explain the properties of the different structures/ crystals. Draw	the structures of different types of crystals.	Describe	the structure of ionic, molecular, giant covalent and metallic substances.	<p>BRICK: Basics and reflective.</p> <p>Knowledge of ionic, covalent and metallic bonding.</p>	<ul style="list-style-type: none"> Practical opportunity: investigate the melting point, solubility and conductivity of substances with different structure types. Students create a summary table to describe and explain the structure and properties of ionic, molecular, giant covalent and metallic substances. Students sketch the structures of diamond, graphite, ice, iodine, magnesium and sodium chloride as solids and label the diagrams to explain their melting/boiling points and conductivity. 	<p>Do Now: Mini-quiz (mastery style questions) peer assessment.</p> <p>Mini-plenary: True or false</p> <p>Self assessment for task review.</p> <p>Assessed homework.</p>	<p>STRETCH:</p> <p>Nuffield Science Data Book (free download): http://www.nationalstemcentre.org.uk/elibrary/resource/3402/nuffield-advanced-science-book-of-data-second-edition</p> <p>Chemistry Data Book (Starck, Wallace, McGlashan) ISBN: 9780719539510</p> <p><i>Chemistry Review</i> article: Graphene (Volume 19, edition 2)</p> <p><i>Chemistry Review</i> article: The disguises of carbon (Volume 18, edition 1)</p>
Explain	the properties of the different structures/ crystals.									
Draw	the structures of different types of crystals.									
Describe	the structure of ionic, molecular, giant covalent and metallic substances.									

		<ul style="list-style-type: none"> Students determine which type of structure a substance has from its properties using data and/or experimentally 									
<p>Lesson 16: shapes of simple molecules</p> <table border="1"> <tr> <td style="background-color: #c8e6c9;"></td> <td>Explain the shape of and bond angles in simple molecules and ions.</td> </tr> <tr> <td style="background-color: #fff9c4;"></td> <td>Describe the shape of and bond angles in simple molecules and ions.</td> </tr> <tr> <td style="background-color: #ffe0b2;"></td> <td>Define the terms bond pairs and lone pairs.</td> </tr> </table>		Explain the shape of and bond angles in simple molecules and ions.		Describe the shape of and bond angles in simple molecules and ions.		Define the terms bond pairs and lone pairs.	<p>BRICK: Knowledge</p> <p>Knowledge of electronic configuration and valence electrons for elements in different groups.</p>	<ul style="list-style-type: none"> Make models of molecular shapes Use balloons to represent electron pairs to demonstrate shapes. Deduce, sketch and name the shapes of given molecules and ions, including bond angles 	<p>Mini-plenary: Mini-quiz review</p> <p>Self assessment for task review.</p> <p>Assessed homework.</p>	<p>STRETCH:</p>	<p>Rotatable shapes https://people.ok.ubc.ca/wsmcneil/vsepr.htm</p> <p>Molymod molecular models</p> <p>RSC exercise on VSEPR theory: http://www.rsc.org/learn-chemistry/resource/res00000648/shapes-of-molecules-and-ions</p>
	Explain the shape of and bond angles in simple molecules and ions.										
	Describe the shape of and bond angles in simple molecules and ions.										
	Define the terms bond pairs and lone pairs.										
<p>Lesson 17: Bond polarity</p> <table border="1"> <tr> <td style="background-color: #c8e6c9;"></td> <td>Explain how polar molecules originate and deduce whether a molecule has a permanent dipole.</td> </tr> <tr> <td style="background-color: #fff9c4;"></td> <td>Describe how polar covalent bonds originate and deduce whether a bond is polar.</td> </tr> <tr> <td style="background-color: #ffe0b2;"></td> <td>Define the concept of electronegativity</td> </tr> </table>		Explain how polar molecules originate and deduce whether a molecule has a permanent dipole.		Describe how polar covalent bonds originate and deduce whether a bond is polar.		Define the concept of electronegativity	<p>BRICK: Knowledge</p> <p>Knowledge of electronic configuration.</p>	<ul style="list-style-type: none"> Predict and explain the trend in electronegativity down a group and across a period. Predict whether covalent bonds are polar or not. Predict whether molecules have permanent dipoles or not. 	<p>Mini-plenary: Mini-quiz review</p> <p>Self assessment for task review.</p> <p>Assessed homework.</p>	<p>STRETCH:</p>	<p>Rotatable shapes https://people.ok.ubc.ca/wsmcneil/vsepr.htm</p> <p>Molymod molecular models.</p>
	Explain how polar molecules originate and deduce whether a molecule has a permanent dipole.										
	Describe how polar covalent bonds originate and deduce whether a bond is polar.										
	Define the concept of electronegativity										

<p>Lesson 18: Forces between Molecules</p> <table border="1" data-bbox="192 301 687 628"> <tr> <td data-bbox="192 301 230 435"></td> <td data-bbox="230 301 687 435"> <p>Explain how the melting points are influenced by these intermolecular forces and the anomalous nature of ice.</p> </td> </tr> <tr> <td data-bbox="192 435 230 564"></td> <td data-bbox="230 435 687 564"> <p>Describe how melting and boiling points of molecular substances depend on the relative strength of intermolecular forces.</p> </td> </tr> <tr> <td data-bbox="192 564 230 628"></td> <td data-bbox="230 564 687 628"> <p>State the three types of intermolecular forces.</p> </td> </tr> </table>		<p>Explain how the melting points are influenced by these intermolecular forces and the anomalous nature of ice.</p>		<p>Describe how melting and boiling points of molecular substances depend on the relative strength of intermolecular forces.</p>		<p>State the three types of intermolecular forces.</p>	<p>BRICK: Knowledge</p> <p>Knowledge of electronic configuration, bonding and polarity.</p>	<ul style="list-style-type: none"> Students produce a summary to compare the three types of intermolecular force. Students explain trends in Group 4, 5, 6 and 7 hydrides. Practical opportunity: Students could try to deflect jets of various liquids from burettes to investigate the presence of different types and relative size of intermolecular forces. Students explain why ice floats on water by reference to hydrogen bonding. 	<p>Mini-plenary: Mini-quiz review</p> <p>Self assessment for task review.</p> <p>Assessed homework.</p>	<p>Nuffield Science Data Book (free download): http://www.nationalstemcentre.org.uk/elibrary/resource/3402/nuffield-advanced-science-book-of-data-second-edition</p> <p>Chemistry Data Book (Starck, Wallace, McGlashan) ISBN: 9780719539510 RSC AfL exercise on hydrogen bonding: http://www.rsc.org/learn-chemistry/resource/res00000129/afl-what-are-hydrogen-bonds-and-where-are-they-found</p> <p><i>Chemistry Review</i> article: All things Ice (Volume 22, edition 3)</p> <p>RSC Kitchen Chemistry: The Structure of Ice and Water http://www.rsc.org/learn-chemistry/resource/res00000813/kitchen-chemistry-the-structure-of-ice-and-water</p> <p><i>Chemistry Review</i> article: Gecko glue (Volume 21, edition 1)</p>	
	<p>Explain how the melting points are influenced by these intermolecular forces and the anomalous nature of ice.</p>										
	<p>Describe how melting and boiling points of molecular substances depend on the relative strength of intermolecular forces.</p>										
	<p>State the three types of intermolecular forces.</p>										

<p>Lesson 19: Revision</p> <table border="1"> <tr> <td data-bbox="190 300 683 389"> <p>Apply knowledge by answering exam questions.</p> </td> </tr> <tr> <td data-bbox="190 389 683 507"> <p>Practice exam technique in order to ensure that key words are used appropriately to answer questions.</p> </td> </tr> <tr> <td data-bbox="190 507 683 596"> <p>Revise different topic covered this half term.</p> </td> </tr> </table>	<p>Apply knowledge by answering exam questions.</p>	<p>Practice exam technique in order to ensure that key words are used appropriately to answer questions.</p>	<p>Revise different topic covered this half term.</p>	<p>BRICK: Reflective</p> <p>Knowledge of all that has been covered since the start of term.</p>		<p>Mini-quiz and mini-quiz review.</p> <p>Exam question practice and review.</p>		<p>Revision websites; Chemguide.com S-cool.co.uk RSC.co.uk</p>
<p>Apply knowledge by answering exam questions.</p>								
<p>Practice exam technique in order to ensure that key words are used appropriately to answer questions.</p>								
<p>Revise different topic covered this half term.</p>								
<p>Lesson 20: End of half term Assessment</p> <table border="1"> <tr> <td data-bbox="190 703 683 770"> <p>Analyse data and use it to answer exam questions.</p> </td> </tr> <tr> <td data-bbox="190 770 683 837"> <p>Calculate relative atomic mass using isotopes abundance data/mass spectra.</p> </td> </tr> <tr> <td data-bbox="190 837 683 904"> <p>Apply knowledge by answering exam questions.</p> </td> </tr> </table>	<p>Analyse data and use it to answer exam questions.</p>	<p>Calculate relative atomic mass using isotopes abundance data/mass spectra.</p>	<p>Apply knowledge by answering exam questions.</p>	<p>Knowledge of all topic covered in lessons 1-8.</p> <ul style="list-style-type: none"> • Atomic structure • Isotopes • Mass spectrum • Period 3 • Group 2 elements. • Bonding • Molecule shapes • Bond polarity • Intermolecular forces. 	<p>Students complete end of topic test.</p>	<p>Assessment based on content covered in lessons 1-19.</p>		
<p>Analyse data and use it to answer exam questions.</p>								
<p>Calculate relative atomic mass using isotopes abundance data/mass spectra.</p>								
<p>Apply knowledge by answering exam questions.</p>								
<p>Lesson 21: End of term Assessment Review</p> <table border="1"> <tr> <td data-bbox="190 1054 683 1153"> <p>Reflect on the test and set revision targets.</p> </td> </tr> <tr> <td data-bbox="190 1153 683 1220"> <p>Correct answers (Self assessment)</p> </td> </tr> <tr> <td data-bbox="190 1220 683 1334"> <p>Review exam questions. www/EBI</p> </td> </tr> </table>	<p>Reflect on the test and set revision targets.</p>	<p>Correct answers (Self assessment)</p>	<p>Review exam questions. www/EBI</p>		<p>Students review their assessments and correct them.</p>			
<p>Reflect on the test and set revision targets.</p>								
<p>Correct answers (Self assessment)</p>								
<p>Review exam questions. www/EBI</p>								

Final assessment task, time required and date. **Assessment:** 2 X 1 hour 30 minutes written examination paper. The papers will consist of objective questions, short questions and

long questions. Students may be required to apply their knowledge and understanding of physics to situations that they have not encountered before. The total number of marks available for this examination paper is 80. It contributes 20% to the Advanced GCE in Physics.
